

Glossary:

Answering - All teams submit their answers through their tablet. The database will automatically verify their answers. After 5 minutes, the host will post the answer to the question so that the players will know if they were correct.

Synonyms: Submitting

Homonyms: None

Answer Tied to Question - Each of the questions for the trivia game are put in storage in the database. Each question will also be connected to the answer to that specific question in storage by some form of marker connecting the two together. When verification is being done, the question is matched first, then the answer is found using the marking matching.

Synonyms: respective answer to question

Homonyms: None

Cheat Sheet - A document containing the answers for each question in the database. This will be given to the host to override points for teams when the database has errors (sends an incorrect notification or does not verify correctly) as well as determine whether or not the wording of a given team still prompts a correct answer, if the database rejects the answer.

Synonyms: Fact sheet

Homonyms: None

Database - holds all of the information regarding the trivia game. This includes all of the team's information (their team name, the team's members, the team's score) as well as all the questions used in the trivia game along with their answers.

Synonyms: None

Homonyms: None

Discussing - Players will discuss their answer to a given question before they submit it through their tablet. The database will verify their answer. Spectators will discuss their answer to a given question, however they do not submit it since they aren't playing in the season.

Synonyms: Planning, considering, analyzing

Homonyms: None

Host - Coordinates the game night. Displays questions, answers and team standings for teams/viewers.

Synonyms: Entertainer, Coordinator

Homonyms: None

Notification - A message from the database to the host on whether or not a team got the answer to a question correct. The host would then give points to teams who got it correct, tell the group they got the question correct, or not reward the team points and tell them they were incorrect.

Synonyms: Alert

Homonyms: None

Override - When the database encounters an error in verification or notification, or the wording of an answer prompts debate on whether or not the answer is still correct if the database says its wrong, points can be added onto the team's total despite the notification being saying they're wrong.

Synonyms: None

Homonyms: None

Player - Players make up a team. They discuss the answers to questions and submit their answers as a team. They can check the standings of any team at any time.

Synonyms: Contestant

Homonyms: None

Score - The amount of points that a team has accumulated through the course of the trivia game.

Synonyms: Points

Homonyms: Standing

Spectator - Do not participate in the trivia night. Simply are there at the restaurant and view the game for entertainment. They discuss answers amongst themselves.

Synonyms: Viewer, audience

Homonyms: None

Standing - The position of a team with respect to the position of other teams (determined by the amount of points each team has).

Synonyms: Ranking

Homonyms: Score

Tablet - each team will have an assigned iPad tablet in order to submit their answers to the database.

Synonyms: device

Homonyms: none

Team - Composed of a group of players. The players will sit at the same table. When the teams are formed, they are assigned to a table, so they use the same tablet throughout the whole season. The database will know which team is which based on the tablet used.

Synonyms: Group

Homonyms: None

Wording - The way in which an answer is presented can be different, yet express the same thing. For example, there can be multiple ways to answer a given question, which is because of the different words used in each. This is important when evaluating the answers to question in the database, as the question can still be correct, but not match the answer in the database.

Synonyms: phrasing, terminology

Homonyms: none

Verification - the process that the database goes through when establishing whether or not the given answer to a certain question is correct. The database takes the given answer, compares it to the answer tied to the question being answered in storage, and returns a notification (correct/incorrect) to the host.

Synonyms: Correctness, validification

Homonyms: None
